SUMMARY

Full-stack and AI engineer with hands-on experience building production-grade LLM-powered applications, with proficiency in Java, Spring Boot, React, Redis, RAG, and large language model API integration. Background spans AI agent engineering, full-stack engineering, and academic research. Enthusiastic about adopting new technologies and taking on new challenges.

EDUCATION

Johns Hopkins University

Master of Engineering in Computer Science, Aug. 2025 – Dec. 2026

Coursework: Machine Learning, Computer Vision, Software System Design, Artificial Intelligence

Zhejiang Gongshang University

Bachelor of Engineering, Software Engineering, Sep. 2021 – Jun. 2025

Coursework: Data Structures, Operating Systems, Software Testing, Design Patterns, Databases, Data Analysis

PROFESSIONAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C, SQL, PHP

Frameworks/Tools: Spring Boot, Vue.js, React, Node.js, Express, Docker, Git, Jenkins, MySQL, JUnit, Vitest

AI/Data: PyTorch, OpenCV, Pandas, NumPy, OpenAI API, Gemini API

PUBLICATIONS

Python's Evolution on Stack Overflow: An Empirical Analysis of Topic Trends

Aug. 2023 – Aug. 2024

First Author, Journal of Computer Languages (COLA), 2025

- Analyzed 2M+ Python-related Stack Overflow posts to uncover topic trends and shifts in library usage.
- Built a GBDT-based model to predict post popularity and support trend analysis.

PROFESSIONAL EXPERIENCE

Hundsun Technologies Inc.

Oct. 2024 – Dec. 2024

Software Engineer (Intern), Hangzhou, China

- Contributed to backend development for transaction middleware and improved development efficiency by using the company's LLM tools for automated code review and documentation generation.
- Identified and resolved business logic issues in existing code, improving code efficiency and readability through design patterns and modularization.

PROJECTS

WearWise - AI-Powered Personal Wardrobe

Jan. 2026 – Present

- Built and deployed a full-stack AI wardrobe platform using React, Express, and MongoDB on Vercel, enabling users to manage clothing inventories and receive AI-generated outfit recommendations.
- Integrated Gemini APIs to build a recommendation engine that suggests outfits based on user prompts, wardrobe inventory, and weather conditions; improved precision using RAG and custom tools.
- Implemented a virtual try-on feature using Gemini's image generation model, allowing users to visualize uploaded clothing items on their own photos and better evaluate outfit choices and potential purchases.

Hybrid defect detection and validation framework for ceramic tiles

Sep. 2025 – Dec. 2025

- Designed an automated surface defect detection system based on YOLOv8 for ceramic tile inspection.
- Optimized the model by integrating Coordinate Attention and SPD-Conv, reducing model size by 28% compared to the baseline YOLOv8s while maintaining inference speed and accuracy.

Kitty Gourmet Food Hall - Online Shopping Platform

Oct. 2023 – Jun. 2024

- Architected a full-stack shopping platform supporting user management, product catalog, and order processing.
- Built the platform with Vue 3 and Spring Boot, deployed it using Docker and Nginx, and wrote unit tests with JUnit; supported 1,000+ concurrent requests with response times under 500 ms.
- Led the full development lifecycle, including project management, feature implementation, and server maintenance, while coordinating development progress and resolving technical issues across stages.

Programmer Forum Recommendation System Based on User Profiling

Sep. 2023 – Mar. 2024

Software Copyright Owner (Jointly)

- Built a recommendation engine with Node.js and Vue 3 that dynamically recommends content based on real-time user interests and actions to reduce information overload.
- Modeled user behavior with Jaccard similarity to identify users with similar interests and build detailed user profiles; incorporated a hotness-based strategy for cold-start recommendations to improve retrieval efficiency.
